PROFESSIONAL SUMMARY

Computer Science Analyst (graduated 2025, UNRC), currently completing a Bachelor's in Computer Science. Backend-focused developer in Java, SQL and Python who has shipped several AI-integrated full-stack projects involving RAG, LLMs and computer vision. Fluent English (C2). Looking for a junior backend role to grow on real production systems.

EDUCATION

Computer Science Analyst — National University of Rio Cuarto (UNRC), 2025 (completed degree)

B.Sc. in Computer Science — National University of Rio Cuarto (UNRC), expected 2027

TECHNICAL SKILLS

Core: Java, SQL, Python (Flask, Sinatra)

Also worked with: JavaScript/TypeScript, Node.js, React, C/C++

Databases: PostgreSQL, MySQL, SQLite

AI/ML: RAG, LLM integration (Ollama, OpenAI), MobileNetV2, embeddings

Tools: Git/GitHub, Docker, Linux, Maven

PROJECTS

Cooking With AI — Full-stack app that detects ingredients from a photo and generates AI recipes

- Built a React + Flask + SQLite backend serving an ingredient-detection and recipe-generation pipeline.
- Integrated MobileNetV2 (image recognition) and a local LLM (Ollama, Gemma2:2B) with Retrieval-Augmented Generation over a recipe dataset.

<https://github.com/joaquinmezzano/CookingWithAI>

Compraria — Shopping-list optimizer for Argentine supermarkets

- Combined embeddings, genetic optimization and LLM-generated explanations to recommend cheaper purchasing decisions.
- Built with Python, TSX and OpenAI integrations.

<https://github.com/joaquinmezzano/compraria>

Compiler Project — Compiler inspired by C/Pascal language design

- Implemented lexical analysis and parsing with Flex and Bison; designed the grammar and syntax analysis.

<https://github.com/joaquinmezzano/proyecto-compiladores>

F1 Quiz & Learn — Educational web app with Formula 1 quizzes

- Built authentication, scoring and user progress tracking backed by a relational database.
- Built with Ruby, JavaScript and SQLite.
